

```
data = {  
    'Emp_ID': [1, 2, 3, 4, 5, 6, 3, 8],  
    'Age': [25, 30, np.nan, 28, 35, 30, np.nan, 40],  
    'Department': ['HR', 'IT', 'IT', 'Finance', 'HR', 'IT', 'IT', 'Finance'],  
    'Experience': [2, 5, 4, np.nan, 10, 5, 4, 15],  
    'Salary': [30000, 50000, 45000, 40000, 70000, 50000, 45000, 90000]  
}
```

Perform the following operations using Python:

Create a DataFrame and display the dataset

Print the first 3 and last 3 records

Remove duplicate employee records

Check for missing values

Replace missing values in numerical columns with their mean

Plot:

A histogram for Salary

A scatter plot between Experience and Salary.

Also Print X-label, Y-Label and Chart label also
